

Peer Evaluations

At 42, peer evaluations play a vital role in our Peer-To-Peer learning system. It's not just about grades; it's a collaborative learning experience. The idea is to explore different approaches and pick up new techniques. Your evaluator might have insights or skills you haven't come across yet, providing an opportunity for mutual improvement in coding abilities. Additionally, it's a great way to interact with peers, fostering connections and potential friendships within the learning community.

➤ Open a Slot:

- Go to your **intra** homepage and click on the **MANAGE SLOTS** button.
- To create a slot, choose the desired day and time, then drag your mouse across the screen to set the duration of the slot.

- If you no longer wish to evaluate at that time, destroy your slot by clicking the **x** button on the top right corner of the slot.

➤ Feedbacks:

- Following each evaluation, it is mandatory to provide feedback to the peer who assessed your work. You are tasked with assigning ratings for four specific factors: Interest, Friendliness, Rigor, and Punctuality.
- Furthermore, you are expected to furnish a written feedback detailing the evaluation process. This includes describing any aspects that captured your interest during the evaluation. Feel free to highlight any noteworthy errors discovered or interesting approaches observed. Maintain a polite tone throughout your feedback.

▶ Bad Practices:

- Don't write short meaningless feedback.

35 % Good Job

5 / 5 Thanks

55 % Good job

5 / 5 Great

▶ Good Practices:

- Write long descriptive feedback.

100 % Great job! The program works perfectly with 0 leaks. I tested everything specified in the eval sheet and got creative in some cases. Happily Navid's push_swap handled all my tests. The code is also clean and readable. After testing, Navid explained to me the used algorithm and I found it brilliant. Good luck!

5 / 5 Super friendly guy. At first, I only watched him running some magical commands to check my code in every aspect, and fortunately, it worked exactly as expected. Then I explained the way I solved this problem as the best as I could. Thanks man, for the evaluation and all the guide I received while doing the project :)

100 % Well done! Fiona did a great job writing a clean, readable code. All cases were handled properly (MAX_INT, 0...). Good luck :D

5 / 5 really thorough with tests and tested everything! thank u !

➤ Evaluation Rules:

- The evaluator should go to the evaluated student's workstation.
- Repetitive, scheduled and group evaluations are strictly forbidden.
- There is a script that detects and reports illegal evaluations.
- Students found evaluating under these conditions will be assigned 4 hours of community service for the first occurrence, receive a warning in addition to 8 hours of community service for the second instance, and face expulsion upon the third violation.
- These rules are in place to optimize your productivity and uphold the effectiveness of peer-to-peer learning.
